## DI N 2440-78 STEEL TUBES MEDI UM WEI GHT SUI TABLE FOR SCREWI NG

## 1. Scope

This Standard applies to medium-weight tubes suitable for screwing. They are suitable for nominal pressure 2 for liquids and nominal pressure 10 for air and non-hazardous gases.
2. Other relevant Standards

DIN 2444 Zinc coatings on steel tubes; quality standard for the hot galvanizing of steel tubes for installation purposes
DIN 2999 Part 1 Whitworth pipe threads for tubes and fittings; cylindrical internal thread and conical external
DIN 17100 Steels for general structural purposes; quality specifications
DIN 50136 Testing of metallic materials; flattening test on tubes
3. Dimensions, designation

Designation of a medium-weight tube suitable for screwing, nominal width 40 , seamlessly galvanized ( $B$ ), in manufacturing lengths:

| 150 | 166.5 | 163.9 |

Wall thickness
$-12.5 \%(-15 \%$ at individual points not longer than 2 X the outside diameter, provided that this reduction is effective only on the outer surface).
The upper limit is fixed by the permissible weight deviation.
10.6 Weight deviations

Compared with the weights specified in the table on page 1 deviations according to the following table are permissible.

| Table 4 |  |
| :--- | :--- |
| for a single tube | for a consignment of not less than 10 t |
| $\pm 10 \%$ | $\pm 7.5 \%$ |

### 10.7 Straightness

The tubes must appear straight to the eye.
10.8 Cold bending capability

Tubes suitable for screwing according to this Standard without surface treatment must be capable of being bent cold by means of a suitable commercial bending tool to a radius of 3 X tube outside diameter up to and including DIN 25 , and to a radius of 3.5 X tube outside diameter in the case of tubes up to nominal width 50 (see Section 11.4 ).
